Result	Value	Unit
Change in static (DC) cross-talk, C_1 $1\times \rightarrow 2\times$	0.0000	%
Rank correlation of 3 Hz cross-talk with C_1 (Spearman ρ, $p \approx 0$)	+1.000	–
Rise in 3 Hz cross-talk over the C_1 sweep	+99	%
Most fatigue-sensitive frequency, by neighbour pressure $\lvert H_{21}\rvert$	1.6	Hz
Usable cross-talk band	0.3–5.7	Hz
Randomized $R/C/P$ sets with monotone cross-talk, all positive sign ($n = 400$)	100	%
Randomized $R/C/P$ sets with more than 10 % drift ($n = 400$)	90	%
